

ABSTRACT OF THE DISCLOSURE

In order to provide a circuit device 10 where a second circuit element 15B is exposed from a sealing resin 16, a circuit device 10A comprises: an island 12 to whose top a first circuit element 15A is fixedly fitted; a plurality of leads 11 which are extended around the island 12 and electrically connected to the first circuit element 15A; a sealing resin 16 which seals the first circuit element 15A, the island 12, and leads 11 and forms a cavity portion 18; and a second circuit element 15B stored in the cavity portion 18. Accordingly, since the second circuit element 15B can be externally provided, the degree of freedom for mounting can be improved.
